

LMP DISK DOUBLER

Installation kit for 2. HDD/SSD (2.5"; instead of DVD drive) for MacBook & MB Pro Unibody

P/N
10412

PRODUCT OVERVIEW

LMP Disk Doubler is a converter kit for MacBook and MacBook Pro Unibody: It allows you to install a second SATA hard drive or SSD instead of the optical drive. Almost all MacBook and MacBook Pro Unibody are supported. Please check the technical specification for further details.

A possible configuration is a super fast SSD (up to 500 MB/s transfer rate) in combination with a standard hard disk. Or expand the capacity by two 2 TB hard drive for maximum 4 TB and use a hard disk as a Time Machine backup. There is even the possibility to set up a RAID volume.

The removed DVD drive can be mounted in an inexpensive USB enclosure (P/N 9413) so that it becomes externally available.

P/N 10412

KEY FEATURES

- Converter kit for additional HDD or SSD
- Supports all MacBook and MacBook Pro Unibody models (from late 2008)
- Installation tool included
- Can be installed within 30 minutes
